

Specialized Grid-tied Device Test Solution

Over 90% of Energy Regeneration Efficiency 

PAS series is a four-quadrant AC power source which is capable of sinking the power from EUT back to the grid with more than 90% efficiency. This function effectively helps to reduce the electricity cost. The PAS series is suitable for testing distributed generation/Grid-tied EUT with energy feedback feature, for example, solar inverter, PCS (power conditioning system), V2G (vehicle-to-grid).

HVRT/LVRT Test

Independently Set Three-phase Values to Simulate Voltage Fluctuations

4 Quadrant Regenerative Capability

Allowing DUT's reverse current to feed back into the grid

Harmonics Waveform Synthesis Function

Adjust Voltage and Starting Phases for Each Step to Create Waveform Distortion

PAS/ PFV series

RoHS Compliant CE

Output Power
30kVA~2000kVA

Interfaces

Standard

RS-232

RS-485

Option

GPIO

Ethernet

USB

Regenerative Grid Simulator

PAS series is developed for renewable energy related applications. It can simulate the various grid conditions and related test standards. Especially for the voltage and frequency transient simulation test feature, which is very suitable for production, quality verification, research and development. It is also built with Low Voltage Ride Through (LVRT) and High Voltage Ride Through (HVRT) test function and gradual mode programmable capability.

PFV Series is a new generation of programmable AC power supply, with four quadrant energy feedback function. This unit not only provides power to the EUT, but also sinks the power back to the grid system which is very useful for grid-tied devices testing applications.

The maximum output power for PAS series is up to 2000kVA, and the PFV series is up to 400kVA. The output voltage range is 0-300V(L-N) and the standard output frequency is 45-65Hz continuously adjustable (optional 40-70Hz).

Regenerative Function

■ PV Inverter Testing Application

PAS series is a four-quadrant AC power source. Even in 2000kVA output power, it is capable to both sink and source over 90% efficiency from the DUT. It is suitable for PV Inverter test, EV charger test or other grid-tied devices test. Built in with Low Voltage Ride Through (LVRT) and High Voltage Ride Through (HVRT) test graph and it is very suitable for IEEE-1547 or BDEW related standards compliance test.

HVRT and LVRT NEW Function

■ Three Phase Independent Output Voltage Setting

Independent setting for three phase high/low voltage ride through to simulate voltage surge and drop.

Low Voltage Ride Through Setting

LVRT Output Waveform

High Voltage Ride Through Setting

HVRT Output Waveform

■ Low Voltage Ride Through Test-IEEE Std 1547.1-2020

Setting for LVRT

LVRT Output Waveform

LVRT Test Standard IEEE Std 1547.1-2020

■ High Voltage Ride Through Test-IEEE Std 1547.1-2020

Setting for HVRT

HVRT Output Waveform

HVRT Test Standard IEEE Std 1547.1-2020

PAS built-in HVRT/LVRT function can simulate the situation when the abnormality is ruled out from on the main AC grid. Simulations such as voltage drop, voltage restore or rising time and remaining time can all be programmed.

GRADUAL and STEP Function

Frequency Gradual Function

Voltage Step Function

PAS / PFV series have multiple programmable functions to precisely and effectively simulate various power line disturbances such as voltage or frequency ramp up or ramp down, transient and step changes.

Regenerative 2000kW Power Supply

Preen has successfully installed the 2000kW, smart inverter ATS in Taiwan's leading testing center for solar, renewable energy and PV inverter testing application.

Harmonics Waveform Synthesis Function (Opt.)

Harmonics Waveform Synthesis
Function Setting

Simulating Harmonics Waveform

PAS series' harmonics waveform synthesis function can allow user to program multiplex distorted harmonic waveform of up to 25 steps. It can simply set up voltage and adjust start phase of each step base on fundamental frequency 50Hz or 60Hz.

Three Phase Independent Adjustment

The Three Phase Independent Adjustment function of PAS series can simulate advanced power line disturbance such as three-phase voltage imbalance or lost-phase, which can further meet up with standard of IEC61000-4-34 and GB/T 17626-34. To set output voltage of each phase independently, user can simply press the screen icon to switch between imbalance or unbalanced voltage setting for three phase independent voltage adjustment.

Phase Angle Adjustment

The PAS series is able to set the phase angle between three phases via the optional phase angle adjustment, for example, user can set phase angle from 120° to 70°, to simulate phase shift for different power conditions.
